ROUTE MAP
TO ILLUSTRATE
TRAVELS AMONGST THE GREAT ANDES
OF THE EQUATOR
BY EDWARD WHYMPER
Scale 8 English Miles to 1 Inch
Scale of Kilometres
Road to Quito
Railway Track
To the N.E. of Cayambe the slopes appear to fall rapidly away
Between Sara-urcu and Antisana the whole of the country is mountainous and the highest summits probably reach 16 to 17 000 feet No mountain here is snow covered but there were numerous small patches of snow upon the highest peaks in April 1880
To the N.E of the summit of Antisana there is an extensive snow (or glacier) plateau
On July 2 1880 from the summit of Cotopaxi much snow was seen upon the highest peaks of the mountains in this district
Note The Latitudes of La Condamine have been used for Quito and Riobamba and 2° 12 2" has been adopted as the Longitude of Greenwich
Note The course of the Railway has been supplied by the Railway Company and is not to be relied upon for traffic
Note The heights are given in English Feet and are from observations by the Author except those marked thus These latter are from the Admiralty Charts and Stanford
Magnetic variation in 1880 was 8° 23 East
Longitude West of Greenwich
Illustrated Lithographed Establishment London
London John Murray Albemarle Street
